

# Secure, Customized & Effective WiFi For Your Business is Smart Business

For over 17 years, Madgig Networks has specialized in all facets of WiFi infrastructures for the business sector and has consistently grown because of their expertise in an overcrowded IT field and their commitment to their clients. At the helm of the company is Joseph F. Voldeck II, owner and Senior Network Engineer, (fondly known to many as "WiFi Joe") who oversees all final plans and is an expert in fast, secure and effective wireless. His team consists of certified and trained professionals passionate about their field, reputation and especially their clients. They oversee projects from initial consultation to survey and design to installation and support.

The company's core projects cover indoor and outdoor spaces, point-to-point, or multi-point, wireless bridges, and controllers within all types of industries. They can install wireless for a variety of businesses such as pre-and-post construction, hotels, marinas, schools, professional complexes and warehousing just to name a few. Most of their business is performed with a higher concentration in Southwest and Southeast Florida but for existing clients with multiple locations or expansion opportunities out of state this service can be arranged if requested.

In addition to expert WiFi engineering and scalability, Madgig is known for their core networking background allowing for customized WiFi networks such as protected guest access, separate sign-on employee access within internal departments, or predetermined bandwidth with options to upgrade additional bandwidth packages for faster ROI. These networking options are even possible without a WiFi infrastructure but can be adapted to change when you are ready to upgrade your network. Madgig also offers a cool Social WiFi option providing downstream marketing opportunities for their clients.

As Joseph Voldeck states, "We offer a specialized skill set in the tech arena so companies either seek us out to become an extension of their internal IT department or we are hired on an outsourced project basis depending on the level of complexity. Not all WiFi is created equal and not all IT staff are as highly trained for this ever-changing technology." Madgig takes pride in understanding the needs and wants of their customer and works in whatever capacity is needed. They do the job right the first time by investigating and fixing the root cause which leads to higher customer satisfaction, repeat business and more referrals.

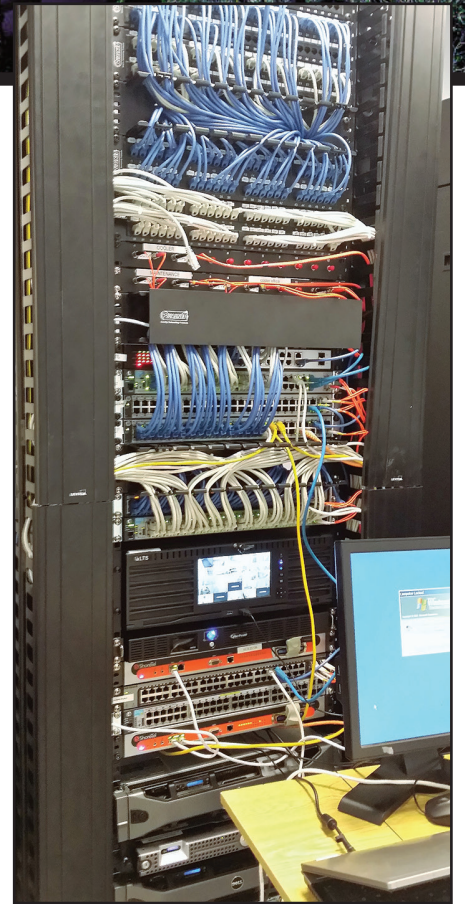

One of the company's newest offerings and in high demand is 4G LTE and 5G Failover. When your business internet provider goes down, their backup system will automatically rollover to wireless 4G or 5G internet seamlessly avoiding downtime or interruption

while your staff, employees or sales teams are on zoom meetings, working on deadlines or even in the middle of client presentations. Once your primary internet connection comes back online, their

system will automatically rollback to your primary connection and shut off the backup system - it's that simple!

The company offers a variety of products and partners with only top WiFi manufacturers and companies known in the industry which have designated Madgig Networks to be Authorized Resellers, Certified Integrators and Engineers to ensure a successful installation. Some of the advantages of being a preferred partner include insider promos, knowledge, and access to equipment before hitting the mass market, more aggressive pricing which can be passed on to the customer and even onsite manufacturer support for more challenging projects.

*Companies hire us as an extension of their internal IT dept or hire us on an outsourced project basis depending on the level of complexity.*

Madgig Networks offer incentives such as free trials, free support with extended support options and even a WiFi coverage guarantee, some conditions apply. If your business needs an upgrade to an existing network or would like to implement enterprise level WiFi please contact Madgig today to see how they can help your business.
