

Client Testimonials

We are a proud Five-Star Service Provider in Florida!

Palm Harbor Marina

"Madgig Networks performed a superior upgrade of our Marina WiFi system and corrected many of the issues we had with our prior install before Madgig."

Daytona Beach Kennel Club & Poker Room

"The reliability of the wireless infrastructure we've received is extraordinary."

The Dorchester South Beach

"Our project (guest WiFi for a 135 room hotel) was delivered on time and on budget."

- » 4G LTE 5G Internet
- » Enhanced Networking & Security

MADGIG NETWORKS is a group of engineers specialized in the wired and wireless space with a focus on the wireless side including commercial WiFi for industries such as hospitality, pharmaceutical, education, resort and marina, warehousing, multi-tenant, or small business to large enterprise. We design, engineer, and install the entire network from fiber or structured cabling all the way to the end user. We can also integrate wireless into an already existing network.

In addition to WiFi, we offer cellular 4G LTE & 5G providing failover redundant connectivity and primary cellular connectivity to various businesses of all sizes. It can even be offered to residential customers on a case-by-case basis depending on certain conditions.

Serving All Industries

Providing WiFi Networking Solutions To Meet All Your Performance & Reliability Needs.

Wired and Wireless Networking

Our approach will look at not only your immediate applications, but also your future applications, the future growth of your organization, and possible technology changes that would impact your cabling needs. Considerations like type of equipment, load balancing, and redundancy will be factored into our cost/benefit analysis. Many recognize our comprehensive design capabilities as one of the best in the industry.

Wifi Engineering and Scalability

WHEN IT COMES TO WIFI, THERE'S NO ONE-SIZE-FITS-ALL! WiFi network design and engineering deployment require careful planning. Business requirements and objectives need to be evaluated and a site survey must be undertaken to identify possible sources of interference. Madgig's certified technicians will determine the best access point placement to ensure consistent coverage and performance across your location.

Business IP Networking

Madgig's engineers can design, install, and maintain a network that supports your company's current needs and its future ambitions. Our capabilities extend to managing every aspect of your networking needs, including wired and wireless networking implementation, consultation, and support.

Mobility and Social Wifi

Madgig's Social WiFi allows customers to log into your network using their social media account. This presents a huge marketing opportunity for your business, because users will immediately see your company's social media profile on the login page and a message that encourages them to connect with your brand.

Improved Customer Experience

Create relevant messages based on data collected from WiFi login through surveys. Our WiFi marketing tools allow you to send emails, SMS, and coupons in real time to visitors in your venue. The result? Incredibly customized marketing campaigns and better customer experiences.

Option to Monetize Your Wifi Bandwidth

Charge users for WiFi usage after a certain period, or for high-speed internet. Madgig's tiered bandwidth gives you a return on investment by billing customers for WiFi use. The solution can be tailored to your needs according to time, speed or usage.
